Vision 2040

Romande Energie accelerates progress towards its target of 5 TWh of low-carbon power generation with the construction of a new wind farm in France

Romande Energie is starting construction of the Les Muids wind farm in north-eastern France. With this project, the Group is taking a further step in developing its renewable energy asset base and continuing to implement its Vision 2040, which aims to achieve 5 TWh of annual power generation under management.

Romande Energie has begun construction of the Les Muids wind farm, located in the Haute-Marne department in France. The wind farm comprises three wind turbines with an installed capacity of 10 MW and is scheduled to be commissioned in summer 2027. It will generate c. 19 GWh of renewable electricity annually, equivalent to the electricity consumption of more than 4,500 households.

Beyond its contribution to low-carbon electricity generation, this project illustrates Romande Energie's growing expertise in delivering renewable energy facilities. Following several acquisitions of operational assets, Les Muids will be the third wind farm built by the Group, further strengthening its know-how in the development, construction and operation of power generation assets.

With this new project, Romande Energie will own seven wind farms in France and Switzerland. The project forms part of the ongoing expansion of its renewable energy portfolio, supporting the electrification of end uses and the energy transition. This trajectory is fully aligned with the Group's Vision 2040, which sets out an ambition to manage a generation portfolio of 5 TWh.

Active in France since 2013, Romande Energie France has a diversified portfolio spanning wind, hydropower and solar energy. This portfolio represents a total gross capacity of 240 MW, spread across 14 operational assets, the Les Muids project and four additional wind projects planned for the coming years. The Group is also pursuing a disciplined acquisition strategy aimed at sustainably strengthening its low-carbon electricity generation portfolio.

Romande Energie Group in brief

A multi-service energy company and the leading electricity supplier in French-speaking Switzerland, Romande Energie Group stands out for its clear positioning: to make French-speaking Switzerland the country's first decarbonised region. With a strategy based on the three pillars of sustainability, the Group aims to reduce its own greenhouse gas emissions and support all its customers in embracing the energy transition.

To achieve this, Romande Energie is making significant investments in the energy transition, both in strengthening and maintaining a safe, high-quality electricity grid and in developing and optimising its local, renewable energy generation assets. Romande Energie offers innovative solutions and renovation programmes designed to accelerate the energy transition in buildings.

As a responsible player, the Group contributes to the development of a sustainable economy. Supporting French-speaking Switzerland on its path towards a sustainable future lies at the very heart of its purpose.
